

How long does it last?

Contrary to popular belief, tattoos are not permanent. They all fade with time. Gang symbols, names, outlines of tattoos are done with India Ink, which never goes away. In time it gets fuzzy and blueish or greenish, but the colors fade. The same is true with the cosmetic colors (which are different dyes than those used in regular tattoos) they too will fade over time. The fading effect though is different with everyone. Some need touch ups in a year, five years, even ten years, but when you need it re-done it is only \$100 to re-new a procedure. The fading depends on the chemistry of your body, not skin type, ethnic background, or dry or oily skin. When you first have your procedure done, you have 6 months to add to your procedure included in the price. Call NATURALLY YOU for your work. Janette 952-881-5008.
